## Commercial Work Boats & Barges

### Unifloats

Purposely designed for use in the construction industry, Unifloats have proven to be the most versatile solution for working over water. They are road transportable, shallow draft, capable of supporting loads of up to 10 tons per float, and can be assembled to create a wide variety of different platforms. In particular, for site investigation work, we offer a spudded, three-float rig with safety boat, which can be transported on a single, standard, forty foot trailer.

<b>Length</b>	<b>5.41 m</b>	<b>Ancillary Equipment Available:</b>
